

MINI-MATE

Effective Against

-Hay Fever, Asthma & Allergies-

**Scientifically Proven
Reduces Exposure to:**

- The Common Cold-
- MRSA-
- Influenza A+B-
- Avian Flu (H5N1), SARs-
- Anthrax, Small Pox-
- Smoke, Pet Dander-
- Mould-
- Perfume, Chemicals-
- Odours, Dust Mites-

MINI-MATE- Your Personal Exclusion Zone

The MINI-MATE generates an intense electrostatic ion wind that charges floating particles in the "breathing zone." The particles are then substantially repelled away from the wearer, creating an almost particle-free "exclusion zone" for toxic allergens, smoke, dust, viruses,

Dimensions: 2.5" x 1.5" x .85".

Compact & Effective...

Most viruses and bacteria measure between 0.04 and 3 microns in size. The technology in the AS150MM has been confirmed by world authorities in health-related aerosol studies to significantly reduce particles in the 0.04 to 3 micron range. Add to that the substantial inhalation risk reductions which have been confirmed under strict laboratory conditions in confined spaces (aircraft cabin simulations), and large test calibration chambers (rooms), and you begin to see how effective the MINI-MATE AS150MM can be. Most germs, smoke, dust, allergens, odours, moulds, perfumes, and pollen are repelled away from you and your breathing zone, giving you cleaner, fresher air to breathe - wherever you may be.*

* MINI-MATE is most effective in indoor environments when the wearer is standing or sitting upright. Outdoor conditions or other positions such as lying down will reduce or eliminate the benefits of wearing a MINI-MATE AS150MM.

What It Does...

MINI-MATE treats the air that people breathe, making it cleaner and safer, substantially reducing the concentrations of airborne particles (moulds, viruses, bacteria, pollens, etc.) in ones breathing zone - thereby significantly decreasing the probability that these particles will be inhaled and as a result will reduce the risk of adverse health effects.

To take full advantage of the portability of your MINI-MATE AS150MM, be sure to order an MINI-MATE Universal Fast Charger. You'll get a universal voltage charger and two rechargeable batteries, all designed to work with your MINI-MATE personal air purifier.

How Does It Work?

The MINI-MATE forms an "electrostatic shield" for the wearer; it does not matter the infectivity or the virulence of the germ; as long as the size is between 0.04 and 3 microns and it obeys the laws of electrostatics, gravitation, diffusion, and turbulence, the MINI-MATE offers protection.

How are different airborne contaminants handled by *The MINI-MATE AS150MM*

- **Virus and Bacterial Germs:** ----- Incinerated by the corona discharge.
- **Odours:** ----- Oxidised into deodorised compounds.
- **Chemical Contaminants** ----- Oxidised into benign chemicals.
- **Dust and Dust Mites** ----- Carbonised and vapourised by incineration.
- **Mould** ----- Carbonised and vapourised by incineration.
- **Second Hand Smoke** ----- Solids are carbonised and gasses are oxidised.

What It Does Not Do...

MINI-MATE does not treat or cure people of any disease nor is it a medical device. It treats the air people breathe, helping make it fresher and safer by substantially reducing the inhalation risk of toxic particles.

No matter where you are, having fresh air can mean the difference between enjoying yourself and being uncomfortable. Whether you're traveling on an airplane or standing in line at the bank, you'll almost always find yourself irritated by dust, smoke, odours, or perfume. Then of course, there's always the things you don't know about: germs, mildew, pollen, and a host of other allergens.
